Garment Testing You Can Trust –
From First Stitch to Final Wash

»We thought we had the perfect fit.
Until the first returns came in.«

That’s what Martina, Product Development Manager at a mid-sized brand, told us after a stressful product launch. The garments looked good on paper, but in the real world? Sizes felt inconsistent, seams didn’t last beyond a few washes, and customer complaints spiked.

Turns out, they had tested fabric quality - but not the garment itself.

Most brands underestimate this one thing: real-life wear testing

At OETI, we go beyond the lab to test how your garment behaves in the hands of your customer. Our service checks:

- **Fit** – using real test wearers to verify sizing and measurement conformity.
- We benchmark every item against detailed **measurement charts**.
- **Workmanship** – assessing seams, closures, and construction details.
- **Durability** – stress tests after washing, abrasion, and wear.
- **Dimensional stability** – does the product retain shape, size, and comfort?

We don’t just give you data - we give you **clear recommendations** to help you enhance fit and functionality before your product hits the market.

Your product deserves to be both compliant and comfortable.
Whether you’re launching fashion, PPE or uniforms:
don’t risk your brand reputation on assumptions.

Confidence in Every Stitch
Independent testing of fit, construction,
and care resistance for quality you can stand behind.

Struggling with these challenges? We’ve got the answers.

Question: Inaccurate Fit Despite Size Charts?
Our answer: Standard size charts don’t reflect real-life fit – testing with wearers uncovers mismatches early.

Question: Are lab results not telling the whole story?
Our answer: Our tests simulate real wear to assess true garment performance and comfort.

Question: Do your products lose shape after washing?
Our answer: We measure dimensional stability after care treatments to prevent complaints.

Question: Unsure how seams and materials hold up over time?
Our answer: We expose long-term durability issues missed by standard lab testing.

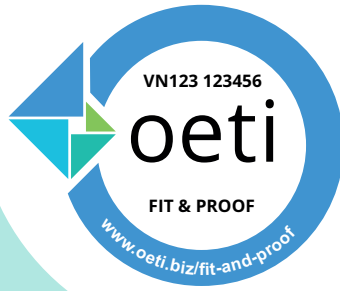

Question: Missing safety validation for public tenders?
Our answer: We verify workmanship and construction to support your compliance.

Question: Are return rates high but reasons unclear?
Our answer: Our insights pinpoint fit and quality flaws causing customer dissatisfaction.

Question: Hard to stand out with your brand and brand communication?
Our answer: Independent validation and clear customer communication with the OETI “Fit & Proof” Label boosts your credibility and brand positioning.

OETI SLOVAKIA – EXPERT SUPPORT AND GLOBAL RECOGNITION.

In 2025, OETI expanded its laboratory network with a new site in Žilina, Slovakia. Located near top universities, this facility extends our physical-mechanical and textile testing capabilities.

OETI Slovakia supports international textile brands with trusted, high-quality results.

As part of the TESTEX Group, we ensure expert support and global recognition.
